Python Code Snippets

Snippet 1

```
first_name = "alex"
age = 35
is_male = "true"

print(first_name)
print(age)
print(is_male)
```

Snippet 2

```
shopping_list = ("milk", "Bread", "butter")

print(len(shopping_list))
```

Snippet 3

```
numbers = [1, 2, 3, 4, 5]
result = []
for num in numbers:
    if num % 2 == 0:
        result.append(num ** 2)
        print(result)
```

Snippet 4

```
week_days = {
    100: "saturday",
    101: "sunday",
    102: "monday",
    103: "tuesday",
    104: "wednesday",
    105: "thursday",
    106: "friday",
}
print(week_days.get(300, "not a valid key!"))
```

Snippet 5

```
queb_list = [
    [2, 3, 3],
    [4, 8, 2],
    [3, 5, 4]
```

```
]
for queb in queb_list:
    result = 1
    for dimension in queb:
        result = result * dimension
        print(result)
```

Snippet 6

```
num1 = 11.45
num2 = 5
result = num1 + num2
print("the result is", result)
```
